

$$P_0 = 2\sqrt{x_{0,1}^2 - 4} = 2.671$$

$N_f = 2+1$ breaking $\times$ $N_f = 2+1$ width
(cross-study; shared σt_0 coherent)

$$2.58 \pm 0.15$$

$N_f = 2+1$ breaking $\times$ near-physical-mass width
(robustness; intra-study correlations unknown)

$$2.91 \pm 0.16$$

$N_f = 2+1$ breaking $\times$ quenched width
(sharpest; quenched-width proxy b_2)

$$2.63 \pm 0.08$$

$$P = (d_{\text{break}}\sqrt{\sigma})\sqrt{\langle r_{\perp}^2 \rangle \sigma}$$
