

$$P_0 = 2\sqrt{x_{0,1}^2 - 4} = 2.671$$

$N_f = 2+1$  breaking  $\times$   $N_f = 2+1$  width  
(cross-study; shared  $\sigma t_0$  coherent)

$$2.58 \pm 0.15$$

$N_f = 2+1$  breaking  $\times$  near-physical-mass width  
(robustness; intra-study correlations unknown)

$$2.91 \pm 0.16$$

$N_f = 2+1$  breaking  $\times$  quenched width  
(sharpest; quenched-width proxy b2)

$$2.63 \pm 0.08$$

$$P = (d_{\text{break}}\sqrt{\sigma})\sqrt{\langle r_{\perp}^2 \rangle \sigma}$$
